OperiqHD workflow pack 01: GovCon opportunity review

Developer handoff | Version 1.0 | 5 October 2026 Demo tenant: Summit Federal Solutions, LLC (entirely fictional) **Opportunity:** FFFA-26-R-001, Integrated Facilities Support (fictional) **Purpose:** Turn a solicitation and company records into an evidence-backed pursue/hold/decline decision, a gap-resolution queue, and a controlled path to proposal preparation. This pack is a cross-industry workflow pattern demonstrated through the GovCon vertical.

1. Outcome and boundary

The user imports or selects a solicitation and its amendments, then OperiqHD extracts requirements, compares them with current company evidence, highlights unresolved gaps, and routes a recommended go/no-go decision for human approval. Once approved to pursue, it creates assigned work items and tracks them through independent compliance review and executive submission approval. The MVP does **not** submit bids, certify eligibility, generate unsupported claims, or send messages without a separate authorized action.

Success measure: A reviewer can see every material requirement, the controlling source, evidence status, owner, due date, and decision history in one opportunity record. For this demo, the system must expose the known blockers and show October 22, 2026 at 3:00 PM ET as the amended deadline.

2. Source package and precedence

The authoritative synthetic source is OperiqHD_Demo_Master_Google_Sheets_Ready.xlsx, GovCon tab, with corresponding documents in OperiqHD_Demo_Universe_82_Mock_Files.zip. The documents are demo data only; fictional names, contacts, agency, contract numbers, and credentials must never be presented as live opportunities or validated certifications.

ID	Source	Role in this workflow
SFS-016	Current Sample Solicitation	Base requirements, original deadline, contract dates, NAICS
SFS-017	Solicitation Amendment 0001	Controlling revised deadline and acknowledgment requirement
SFS-018	Proposal Preparation SOP	Workflow order, source precedence, no-invention rule
SFS-001–004	Company profile, capability, SAM summary, NAICS	Company profile and preliminary fit evidence
SFS-007	Safety plan	Internal safety practices; explicitly **not** the required federal certification
SFS-009	Insurance summary	Coverage and 2026-12-31 expiration; renewal evidence absent
SFS-010–012	Three past-performance records	Two complete references; SFS-011 lacks customer POC name, phone and email
SFS-013	Past proposal	Historical 12-person statement that must not override current 15-person profile
SFS-014	Labor rate sheet	Four rates; no approved Warehouse Specialist rate
SFS-008, SFS-015	Subcontractor policy and key personnel	Approval authority and potential assignment context

Apply precedence in this order: (1) solicitation amendments over changed base terms; (2) current verified company records over historical proposal language; (3) source-specific effective/expiration dates; (4) unknown or conflicting facts

remain unresolved. Keep both superseded and controlling values visible with citations. No model-generated inference can change a requirement or establish a credential.

3. Trigger, inputs, outputs

Trigger: A Proposal Manager creates an opportunity and uploads/selects the solicitation. On each new amendment or changed company document, rerun affected checks and create an alert showing what changed. Never silently overwrite an approved decision.

Inputs: PDF/DOCX solicitation and amendments; approved company document library; user-provided internal opportunity owner and target decision date. For this demo, source IDs above stand in for repository paths. A production connector may later ingest from an authorized system, but the MVP can run on uploaded files.

Outputs: Opportunity summary; versioned requirement register; evidence map with precise source references; gap queue; risk/priority summary; go/no-go recommendation; signed decision record; proposal checklist and audit trail. Export as CSV/PDF is optional after the interactive view works.

4. Canonical record and minimum fields

Store one Opportunity per tenant + solicitation number, with separate Document, Amendment, Requirement, EvidenceLink, Gap, Decision, Task, and AuditEvent records. Every record has a stable ID, tenant ID, created/updated timestamps, source version, and actor. Use timezone-aware instants for deadlines and preserve the source's displayed local time and timezone.

Entity	Required fields
Opportunity	solicitation number, agency, title, NAICS, place of performance, contract type, performance dates, controlling deadline, status, owner
Document	document ID, type, title, file hash, effective/issue date, upload time, version, source locator, superseded flag
Requirement	category, exact requirement text, normalized test, mandatory/conditional, controlling document and passage, deadline if applicable, status
EvidenceLink	requirement ID, document ID, passage/field locator, extracted value, verified-by, verification time, validity dates, confidence, conflict flag
Gap	requirement ID, missing/conflicting/expired/at-risk reason, severity, owner, due date, proposed resolution, status, proof of closure
Decision	recommendation, rationale, reviewer, decision (pursue/hold/decline), timestamp, override reason, snapshot of source versions and open gaps
Task	gap/checklist link, assignee, due date, status, completion evidence
AuditEvent	actor, action, object, old/new values, time, source/run ID, authorization outcome

Statuses for each requirement: met, missing, conflict, expiring, not_applicable, pending_review. Statuses for opportunity: intake, review, hold, approved_to_pursue, declined, proposal_in_progress, compliance_review, executive_approval, ready_for_manual_submission, closed. Met requires linked valid evidence, not merely a generated summary.

5. Deterministic rules and demo expected result

Rule	Logic	Expected FFFA-26-R-001 result
Amendment precedence	Match amendment to solicitation; latest issued applicable amendment replaces only its changed terms.	Deadline = **2026-10-22 3:00 PM ET**, not October 15. Amendment 0001 acknowledgment remains an open final-submission checklist item until recorded.
Company fit	Compare solicitation NAICS and scoped work against approved current NAICS/capability records.	NAICS 561210 appears in SFS-002/004; facilities/custodial/grounds/logistics are supported at a preliminary level. This is not an eligibility determination.
SAM	Check status and expiration relative to decision/submission, then request current verification before real submission.	Synthetic SFS-003 says active through 2027-05-31; label demo record, not a live SAM check.
Required certification	Exact credential named in solicitation must have current documentary proof. A safety plan is not equivalent.	**Missing critical:** Federal Facilities Safety Certification; SFS-007 explicitly disclaims it.
Insurance	Compare evidence validity against required contract commencement and stated coverage.	SFS-009 expires 2026-12-31; contract begins 2027-01-01. **Gap:** updated coverage evidence for performance commencement. Do not imply renewal occurred.
Past performance	Require 3 completed projects within five years, each with contract number, customer, value, period, scope, POC name, phone and email.	SFS-010 and SFS-012 complete on their face. SFS-011 lacks all three POC fields. **Gap:** complete reference or approved substitute.
Rates	Each required labor category must map to an approved effective rate before firm-fixed pricing can be finalized.	Program Manager $78, Facilities Technician $52, Custodian $31, Grounds Technician $34/hour; **Warehouse Specialist missing** in SFS-014. No estimated rate.
Current facts	Prefer effective current records to historical proposal prose.	Headcount = **15** from SFS-001/005; do not reuse 12 from SFS-013 as current.
No invention	Missing facts stay missing until a human supplies and verifies evidence.	Never fabricate a certification, renewal, POC, warehouse rate, or amendment acknowledgment.

Initial recommendation: **HOLD for resolution**, with a visible human choice to decline or approve a conditional pursuit. The system must distinguish approved_to_pursue from ready_for_manual_submission; a conditional pursuit does not close mandatory gaps. A reviewer may record a reasoned override, but cannot mark a requirement met without evidence. No automatic proposal submission is permitted.

6. Risk, priority and autonomy

Classify a mandatory missing credential, unresolved requirement, or passed deadline as critical; expiring coverage or incomplete required reference/rate as high; documentation improvements as medium. Priority can consider deadline proximity and effort, but must display the factors and permit a human to correct them. Do not invent an opportunity value or win probability. Optional fit scoring must be labeled a heuristic, never a legal eligibility finding.

Action	Default autonomy	Authorization
Extract, compare, cite and recommend	Recommend automatically	Read access to selected documents
Create draft internal gaps/tasks	Prepare for approval	Proposal Manager reviews before assignments/notifications

Action	Default autonomy	Authorization
Change pursue/decline status or override a blocker	Human approval required	Proposal Manager plus recorded rationale; executive approval configurable
Mark evidence verified or requirement met	Human review required for material requirements	Authorized reviewer and linked source
Final pricing, certification attestation, final proposal approval, submission	Manual only in MVP	Designated human authority; no automatic external send

For production, tenant administrators configure roles, thresholds and approval routing. The demo role mapping is illustrative: Elena Ruiz, Proposal Manager; Darius King, Operations Manager; Maya Brooks, President. SFS-008 gives Darius subcontractor approval only up to $25,000 expected annual spend, with higher spend requiring Maya; it does **not** grant him authority to approve a bid or invent a subcontractor. Do not infer absent approval limits.

7. Workflow and screens

1. **Intake:** Upload/select SFS-016 and SFS-017; de-duplicate by solicitation number + file hash. Show source filenames and issue dates.
2. **Parse:** Extract solicitation metadata, sections, requirements and amendment deltas. Flag low-confidence fields for confirmation. Record exact text spans/page or document section.
3. **Match:** Search only tenant-approved evidence. Show requirement → evidence → status with source dates and conflicts. No cross-tenant retrieval.
4. **Review:** Show a summary card (deadline, fit, critical/high gaps), a requirements grid, amendment timeline, and gap queue. Each row opens the cited passages.
5. **Decision:** Generate HOLD recommendation with reason codes. Human records pursue/hold/decline and conditional rationale; preserve a snapshot.
6. **Resolve:** Assign certification verification, insurance renewal proof, SFS-011 reference contact, approved Warehouse Specialist rate, and amendment acknowledgment. Recheck each changed requirement when new evidence arrives.
7. **Proposal gate:** When pursuing, follow SFS-018: evidence mapping, drafting, independent compliance review, executive approval, manual submission. The UI must not imply that pursuit approval means submission readiness.

Minimum screen elements: sortable requirement grid (Category, Requirement, Status, Evidence, Owner, Due, Last checked); an amendment banner with old/new deadline; a side-by-side cited-source viewer; blocker queue; decision panel; audit history. A demo walkthrough should reach the known result in five minutes without hidden manual edits.

8. Gap ownership and suggested internal dates

These are **demo planning targets**, not solicitation deadlines or commitments. The Proposal Manager can adjust them. Set internal resolution dates before October 22, 2026 at 3:00 PM ET, with a buffer for compliance and executive review. Do not auto-send external requests.

Gap	Suggested owner	Closure proof
Federal Facilities Safety Certification	Proposal Manager + Operations Manager	Valid certificate or documented no-go/clarification decision
Coverage after 2026-12-31	Operations Manager	Broker/carrier evidence covering required commencement and limits
SFS-011 POC fields	Proposal Manager	Verified name, phone and email or accepted replacement project

Gap	Suggested owner	Closure proof
Warehouse Specialist rate	President/authorized pricing lead	Approved effective rate in rate sheet
Amendment 0001 acknowledgment	Proposal Manager	Recorded acknowledgment in final package checklist

9. Audit and security requirements

Log imports, extraction runs, source versions, requirement edits, evidence links, reviewer confirmations, status transitions, assignments, approvals and overrides. Preserve before/after values and who acted. A new amendment invalidates affected derived checks and alerts the owner; retain the old decision snapshot and require reconfirmation if the change is material. Use tenant-isolated storage and retrieval, role-based access, encryption in transit/at rest, and least-privilege document access. Include delete/export capability under tenant retention settings; do not embed real customer data in the synthetic demo.

10. Acceptance tests (run against the supplied synthetic dataset)

1. Import SFS-016 + SFS-017 in either order. The displayed due date is Oct 22 at 3:00 PM ET, with Oct 15 shown as superseded, and Amendment 0001 acknowledgment open.
2. Import SFS-007. The certification requirement stays missing; a safety plan cannot satisfy it.
3. Import SFS-009. Coverage is marked expiring/at-risk for Jan 1, 2027 commencement and cannot be closed by a claim that renewal is likely.
4. Import SFS-010–012. The count is three project records, but only two have complete required contact information. SFS-011 produces three missing-field findings.
5. Import SFS-014. Four rates display exactly; Warehouse Specialist remains missing. A pricing-complete gate fails.
6. Import SFS-001/005 and SFS-013. Current headcount displays 15 and the historical 12-person sentence is visibly dated/flagged.
7. Recommendation is HOLD, with critical/high gaps and citations. A human can approve conditional pursuit with reason, but the submission gate remains blocked until mandatory items are resolved and final approval recorded.
8. Upload an updated amendment that changes the deadline; the affected derived field is recalculated, old/new values and source versions stay in audit history, and any earlier approval requiring reconfirmation is flagged.
9. Upload the same document twice; no duplicate requirements/tasks are generated. A changed file version triggers a delta review.
10. Try to mark the certification met without linked evidence or retrieve another tenant's document; both actions fail with an auditable reason.

11. Implementation order and definition of done

MVP slices: (1) import + source viewer + extraction; (2) deterministic requirements/evidence engine + amendments; (3) gap queue + decisions + audit; (4) demo script and the ten acceptance tests. For the first developer review, deliver a seeded demo tenant, test fixtures from the 18 GovCon source records, a brief schema/API note, and a screen recording of the complete scenario.

The pack is done when a reviewer can reproduce all ten tests, understand why the recommendation is HOLD, open the controlling sources for every finding, approve a conditional pursuit without erasing gaps, and see exactly what a human must resolve before a compliant manual submission. The same schema should support future property management, logistics, professional services, HR and field services packs without embedding GovCon rules in shared code.

Open product choices for later validation: production repository connectors, customer-specific approval roles, retention period, procurement-specific scoring weights, and whether submission is ever supported. None is required to demonstrate this pack.
